

## **ABSTRACT OF THE DISCLOSURE**

A device is used to fix the stem of a bicycle which is transported by a vehicle. The device comprises an expandable rod and two holders which are fastened respectively at two  
5 opposite ends of the expandable rod, with the first holder being used to fix the stem of the bicycle in conjunction with a confinement rod and a fastening knob, and with the second holder being fastened with the seat post of the bicycle in conjunction with a confinement rod and a fastening knob. The  
10 first holder is further provided with a restraining piece which is used to confine a handlebar fastened with the stem of the bicycle.
